

Each user's profile comes with standard functionality and addons; however, users can enhance their profiles by activating custom applications.

The following are the core applications within each user's profile:

- **My Blogs:** Displays a user's blog entries within their profile.
- **My Blog Comments:** Displays a user's blog comments within their profile.
- **My Forum Posts:** Displays a user's forum topics and replies within their profile.

The following are applications that can be added:

- **My Wall:** Displays comments made to a user by community members within their profile.
- **My Friends' Locations:** Displays the geographical location of a user's friends using Google Maps within their profile.
- **My Tweets:** Allows a user's Twitter updates within their profile.
- **My RSS Feeds:** Displays a user's chosen RSS feed within their profile.

Adding Applications

To add an application to your profile, log into the FDLP Community Site and then from the profile tool menu choose *Applications > Browse*. You will now see a list of all applications that are available to include in your profile. The list includes all core and custom addons.

 My Blog Comments JomComment for JomSocial AzrulStudio 2008	7 October 2008	1.0	AzrulS	

Configuring Application Settings

Applications may need to be configured in order to function. For example, the My Tweets application requires users to set their Twitter login details in order to display tweets within their FDLP Community profile.

To configure an application's settings, go to the Applications > My Applications and choose the appropriate "settings" link.

Core Applications

Application	Settings	Privacy	
 My Blogs [About]	Settings	Privacy	F
 My Blog Comments [About]	Settings	Privacy	M
 My Articles [About]	Settings	Privacy	M
My Web Links [About]	Settings	Privacy	M

Modify Application Privacy Settings

Users can decide which users can view their applications. There are three types of privacy types:

- Everyone: The application activity will be publicly accessible.
- Friends: Only a user's friends may view the application activity.
- Only Me: Only a user can view the application activity.

To modify an application's privacy settings, go to the Applications > My Applications, select the "Privacy" link, and choose which privacy type is preferred.
